# 8x4 2-Wire Matrix Card

Switching and I/O Cards

8 x 4 Matrix Card

## Features:

The 8 two-wire Input Columns on the left may be connected to any of 4 Output Rows (3 BNCs and 1 Header Connector) at top and bottom of the board.. Typical application connects the 3 BNCs to an Oscilloscope, and the Header to a DMM.

All Inputs are fused on the high and low lines.

All relays have built-in protective diode and status LED.

All relay drivers have status LED for ease of checkout.

Communicate directly to the board with I2C, or with USB-I2C or RS232-I2C adapter.

3 Matrix cards configured as a 24x4

The outputs can be connected in parallel with additional matrix cards to expand to larger matrices.

For Example, 3 matrix cards in parallel will form a 24X4 matrix as shown in the photo to the left.

# 16x1 2-Wire 5A Multiplexer Card

Switching and I/O Cards

16 x 1 Mux Card

## Features:

Any one of the 16 two-wire Input Columns on the left may be connected to the Output on the Header Connectors at top and bottom of the board.

All Inputs are fused on the high and low lines.

All relays have built-in protective diode and status LED.

All relay drivers have status LED for ease of checkout.

Communicate directly to the board with I2C, or with USB-I2C or RS232-I2C adapter.

# 16 General Purpose Form-A 10A Relay Card

Switching and I/O Cards

16 General Purpose Relay Card

## Features:

16 Form A Relays Rated for 10A each.

All Inputs are fused and have built-in protective diode and status LED.

All relay drivers have status LED for ease of checkout.

Communicate directly to the board with I2C, or with USB-I2C or RS232-I2C adapter.

# Optically Isolated 16 Channel Relay Driver Cards

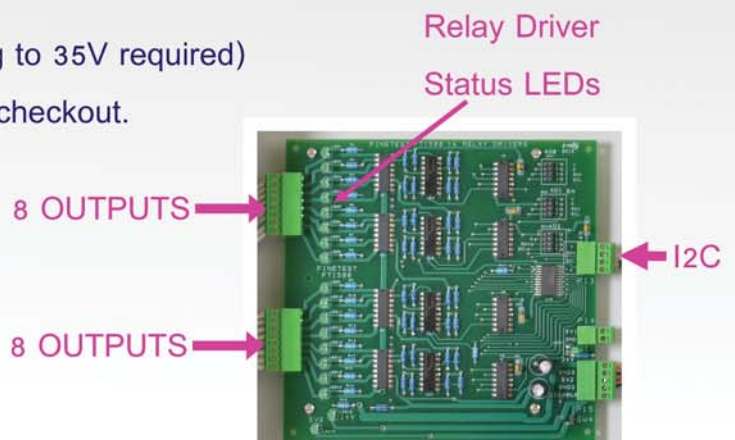

Switching and I/O Cards

## Features:

### 16 Channel Relay Driver Card

- 16 Optically Isolated Relay Drivers.
- Open Collector with 600mA output current.
- 800mA Output Clamp Diodes.
- 70V Breakdown (for inductive loads, clamping to 35V required)
- All relay drivers have status LED for ease of checkout.
- Communicate directly to the board with I2C, or with USB-I2C or RS232-I2C adapter.

# Non-Isolated 16 Channel Relay Driver Cards

Switching and I/O Cards

16 Channel Relay Driver Card

## Features:

16 Non-Isolated Relay Drivers, Open Collector with 600mA output current.

800mA Output Clamp Diodes, 70V Breakdown (for inductive loads, clamping to 35V required)

All relay drivers have status LED for ease of checkout, Communicate directly to the board with I2C, or with USB-I2C or RS232-I2C adapter.

# Optically Isolated 16 Channel Relay Driver Cards with De-Bounce Circuit for Scope Triggering

Switching and I/O Cards

## Features:

### 16 Channel Relay Driver Card

16 Optically Isolated Relay Drivers with De-Bounce Circuit for clean Scope Triggering.

Open Collector with 600mA output current.

800mA Output Clamp Diodes.

70V Breakdown (for inductive loads, clamping to 35V required)

All relay drivers have status LED for ease of checkout.

Control line inputs from external relays or digital I/O

# Quad 4x1 High Frequency Multiplexer

*Quad 4x1 HF Mux*

Switching and I/O Cards

## Features:

- Four 4x1 HF Switches are controlled by a FineTest Relay Driver Card.
- All relay drivers have status LED for ease of checkout.
- Communicate directly to the board with I2C, or with USB-I2C or RS232-I2C adapter.

# Examples of FineTest ATEs using FineTest Switching and I/O Cards

Switching and I/O Cards

3 16 GP Relay Cards

3 16x1 Mux Cards

Quad 4x1 HF Mux

3 8x4 Matrix Cards

# Examples of FineTest ATEs using FineTest Switching and I/O Cards

8 16 Channel  
Relay Driver Cards  
controlling 96 Relays

Switching and I/O Cards

2 16 Channel Relay Driver Cards  
with De-Bounce Circuit  
controlling 32 Relays

# FineTest Switching & I/O Cards with Built-In Virginia Panel Connectors

## Typical ATE Relay Card Assembly without FineTest Cards

## **FineTest “ALL IN ONE” Solution!** **NO MAINFRAME! NO CABLING! NO ADDITIONAL CONNECTORS!**

### FEATURES:

- The units have USB and Ethernet interfaces.
- Provided are Software Drivers for NI LabVIEW, NI LabWindows/CVI, Microsoft C# and Agilent VEE.
- Direct Programming with I<sup>2</sup>C, USB and Ethernet.
- The units have optional fuse input protection.
- The rows of the matrices and multiplexes are available at the Virginia Panel Connectors and at the rear of the cards for wiring to instruments in the systems or in the fixture.

Front view of a FineTest ATE with the Virginia Panel dropped down  
showing multiple FineTest Switching Cards installed

# 28x4 2-Wire Matrix Card

Switching and I/O Cards

*28 x 4 Matrix Card with Cover Removed*

## Features:

The 28 two-wire Input Columns on the left may be connected to any of 4 Output Rows at the VP Connector or the 4 BNCs at the rear of the board. Typical application connects 3 BNCs to an Oscilloscope, and one to a DMM. All Inputs are fused on the high and low lines. Communicate directly to the board with I2C, or with USB-I2C or RS232-I2C adapter.

*28 x 4 Matrix Card with Cover*

# 16 General Purpose Form-A 5A Relay Card

Switching and I/O Cards

16 General Purpose Relay Card

## Features:

16 Form A Relays Rated for 5A each.

All Inputs are fused.

Communicate directly to the board with I2C, or with USB-I2C or RS232-I2C adapter.

 **FineTest**  
[www.finetest.com](http://www.finetest.com)

# Dual 16x1 Multiplexer Card

Switching and I/O Cards

Dual 16 x 1 Mux Card with cover removed

## Features:

Communicate directly to the board with I2C, or with USB-I2C or RS232-I2C adapter.

The Mux Outputs are available on the same VP connector, or on the rear connector.

All Inputs are fused on the high and low lines.

The two 16x1 Single Wire Muxes can be used as

- Dual Independent 16x1 Single Wire Muxes

- Single 32x1 2-Wire Mux

- Single 16x1 Four Wire Mux

# Optically Isolated 16 Bit Digital IO Cards

Switching and I/O Cards

## Features:

### 16 Bit Digital I/O Card

16 Bit Optically Isolated Digital I/O, Open Collector with 600mA output current.

Communicate directly to the board with I2C, or with USB-I2C or RS232-I2C adapter.

 **FineTest**  
[www.finetest.com](http://www.finetest.com)

# Dual 16x1 Multiplexer Card

Switching and I/O Cards

Dual 16 x 1 Mux Card with cover

## Features:

Communicate directly to the board with USB or Ethernet.

The Mux Outputs are available on the same VP connector, or on the rear connector.

All Inputs are fused on the high and low lines.

The two 16x1 Single Wire Muxes can be used as

Dual Independent 16x1 Single Wire Muxes

Single 32x1 2-Wire Mux

Single 16x1 Four Wire Mux

# 16x9 Single Wire Low EMF Matrix Card

Switching and I/O Cards

*16x9 Single Wire Matrix Card with cover removed*

**Features:** 16 x 9 Low EMF Matrix Card. Less than 1uV emf relays used  
All Inputs have optional fuses.  
Communicate directly to the board with I2C, or with USB-I2C or RS232-I2C adapter.

*16x9 Single Wire Matrix Card with cover*

# 48x9 Low EMF Precision Matrix

Switching and I/O Cards

*Cover removed showing 3 16x9 Cards*

## Features:

Precision 48X9 low EMF Matrix

Less than 1uV emf relays used

1U Rack-Mount Height

USB and Ethernet Interface

Software Drivers for:

NI LabView & LabWindows/CVI,

Microsoft C#, Keysight (Agilent) VEE

*Front view with cover*

# 96x9 Low EMF Precision Matrix (Dual 48x9 in Parallel)

Switching and I/O Cards

*Front View of two 48x9 configured as a 96x9 Low EMF Precision Matrix*

*Close-Up of one 16x9 Low EMF Precision Matrix Card*

# 32x4 5A Power Matrix Unit

Switching and I/O Cards

*Top Angle view of Power Matrix Unit*

## Features:

32x4 Matrix 5A@30Vdc/240Vac

USB and Ethernet Interface

*Side view of Power Matrix Unit*

# Communications Adapter USB/Ethernet to 3 I2C Ports

Switching and I/O Cards

USB or Ethernet to 3 I2C Ports Communications Adapter

## Features:

Communications Adapter:

USB or Ethernet to 3 Independent I2C Ports

Each Port has user ueselectable switches to set:

Pull-Up Resistors On/Off

Power to Power Pin On/Off

3.3V or 5V Power
